

# SANTHOSH

Software Engineer | React | Angular | Vue | TypeScript

Chennai, Tamil Nadu, India | +91 97894 29543 | [santhoshmail21@gmail.com](mailto:santhoshmail21@gmail.com) | [imsanthosh.tech](https://imsanthosh.tech) | [/in/santhosh21](https://in/santhosh21)

## PROFESSIONAL SUMMARY

Frontend-focused Software Engineer with **3 years 9 months** of experience building and supporting production UI components in TypeScript across React, Angular, Vue, JavaScript, ASP.NET Core, and ASP.NET MVC. Promoted from Level 1 to Level 5 at Syncfusion, including a two-level promotion in January 2026. Combines feature development with direct problem-solving for customers, plus REST API work in Node.js and C#/.NET backed by MySQL and SQL Server. Used Claude Code and OpenAI Codex for AI-assisted development.

## TECHNICAL SKILLS

|                       |                                                                                                                                          |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| Frontend              | TypeScript, JavaScript, React, Angular, Vue, HTML, CSS, Web Accessibility                                                                |
| Backend & Data        | C#, .NET (ASP.NET Core, ASP.NET MVC), Node.js, REST APIs, MySQL, Microsoft SQL Server                                                    |
| Engineering Practices | Git, Azure DevOps, code reviews, sprint planning, release validation, debugging and issue reproduction, technical documentation (Jekyll) |
| DevOps                | Docker, Docker Compose, Portainer, Cloudflare Tunnel, Ubuntu server                                                                      |

## PROFESSIONAL EXPERIENCE

**Syncfusion** Sep 2022 – May 2026

**Software Engineer (Level 1 to Level 5)** | Essential JS 2 Grid Team: Development and Technical Support

*Promotions: Level 2 (Jul 2024), Level 3 (Jul 2025), Level 5 (Jan 2026, two-level promotion)*

### Development and Maintenance

- Developed and enhanced the TypeScript source of the Essential JS 2 Grid, a production data-grid component, delivering **10+ features** and **~500 bug fixes** across editing, searching, paging, accessibility, and the DataManager data layer.
- Worked across the component’s JavaScript, React, Angular, Vue, ASP.NET Core, and ASP.NET MVC distributions to reproduce, fix, and validate framework-specific behaviour.
- Contributed to **~30 product releases** by taking part in sprint planning, code reviews, and release validation.

### Technical Support and Customer Engineering

- Resolved **~1,500 support tickets** raised by professional developers through BoldDesk, diagnosing issues in their applications and building complete, framework-specific reproduction samples.
- Ran live Microsoft Teams remote-access sessions to debug directly in the customer’s environment when no reproducible sample was available and the issue could not be reproduced internally.
- Took over and resolved multiple customer cases escalated to me by other support team members.

### Samples, Documentation, and Backend Integration

- Built multiple full-featured, framework-specific dashboard-style applications that showcase component capabilities for customers and product demos.
- Created and modified REST API endpoints in Node.js and C#/.NET to serve data to the component, using MySQL and Microsoft SQL Server as data sources.
- Authored documentation for DataManager adaptors and database connectivity and corrected multiple sections of the Grid documentation; previewed changes locally using Jekyll.

## PROJECTS

**Stockroom: Inventory Management App** [inventory.imsanthosh.tech](https://inventory.imsanthosh.tech)

React, TypeScript, Node.js, Express, MySQL, Docker | [github.com/santhosh021/inventory-management-app](https://github.com/santhosh021/inventory-management-app)

- Full-stack inventory app (stock tracking, low-stock alerts, dashboard, CSV export): React/TypeScript client, Node.js/Express API, MySQL, with stock changes enforced by database transactions and row locking; covered by **30 automated API tests**.
- Containerised with Docker Compose and self-hosted on an Ubuntu server (Portainer), served over HTTPS on a custom domain through a Cloudflare Tunnel.

**Nexus: Public Data Explorer** [nexus.imsanthosh.tech](https://nexus.imsanthosh.tech)

React, TypeScript, Node.js, Express, Docker | [github.com/santhosh021/nexus](https://github.com/santhosh021/nexus)

- Nine public APIs (GitHub, npm, weather, crypto, currency, Stack Overflow, Hacker News, DEV.to, security vulnerabilities), each with its own themed view suited to its data, with an animated theme transition between panels.
- Node/Express proxy keeps every API key server-side and caches responses to respect rate limits; a React error boundary keeps the app usable if any one panel fails.

## AI-ASSISTED DEVELOPMENT

- Use **Claude Code** and **OpenAI Codex** with IDE integration in professional work at Syncfusion and on personal projects.
- Working knowledge of agent rules, subagents, skills and **MCP servers**, plus context and token management.

## EDUCATION

**B.Tech, Information Technology** | M.A.M. College of Engineering, Tiruchirappalli

2018 – 2022 | CGPA: 8.46 / 10
